Amble - Hadston Carrs Coastline October 1987	Report aimed to review the geological, botanical and marine biological resources of the coastline between the south pier at Amble and Hadston Carrs at the north end of Druridge By in order to emphasise the potential of the area for interpretation to the general public and more formal education. Site visits were carried out duruing the Spring and Summer of 1987, all habitats were visited with an emphasis on shore habitats. Geological and botanical interest has been summarised from reports and publications and from personal communciation with Dr N. Scott, warden at Northumberland Wildlife Trust Reserve at Hauxley. Report contains site descriptions and species lists of algae, marine invertebrates, fish and terrestrial plant species.	Amble to Hadston Carrs	121	06/03/2014	01/01/1987	31/12/1987	Alga, Invertebrate, Fish, Chromist, Crustacean, Plant, Sponge	10	Management
Amphibian Survey of Quarry House Moor Ponds 2002	The aim of the survey is to ascertain the presence and species of amphibian presence within Quarry House Moor Ponds SSSI. Nocturnal surveys were carried out on the ponds within Forestry Commission ownership after a full daytime walkover search of the SSSI was conducted to identify their importance within the site. The surveys were repeated five times during the months of May and June 2002. Great Crested newts and other amphibians were found and other notable mammal bird and reptile species were noted. Pdf report includes a site description, detailed methodology and results, as well as management implications.	Quarry House Moor Ponds, Chatton	46	07/04/2014	01/05/2002	30/06/2002	Amphibian, Bird, Plant, Invertebrate, Reptile, Mammal	11	Management
Amphibians - planning application data & occasional records	Ongoing planning application data & occasional records from 2000 to 2016	Northumberland	599	15/01/2016	13/05/2000	31/12/2015	Amphibian	12	Custodianship

Border Mires 1994	Botanical surveys to assess the state of mires at 19 sites in Northumberland (mostly) to the north of the A69 and south of Kielder. Surveys were carried out by M White in October and November 1994.	Northumberland	326	31/01/2008	20/10/1994	18/11/1994	Plant, Lower Plant	56	Management
Border Mires Invertebrate Project 1989 - 1992	Surveys of invertebrates in mires at 35 sites in Northumberland, mainly in and to the north of Wark Forest. Mostly done in June and July 1992 with additional data from 1989 and 1990.	Northumberland	2767	26/11/2008	01/01/1989	03/07/1992	Invertebrate	57	Management
Botanical Records SSSI Monitoring	Botanical surveys of 28 SSSI sites, mostly in Durham but also one site in South Tyneside, one in Sunderland and one in Darlington. Most of the surveys were single visits but some involved several visits in a year or visits in different years.	North East	480	03/07/2014	19/07/1985	29/06/2009	Lower Plant, Plant	58	Management
BRC - Cranefly - NBN Download	The data originated from Alan Stubbs and John Kramer of the Cranefly Recording Scheme and includes their own records as well as those collated from various recorders. This is part of a larger dataset collected by volunteers from the Scheme. Non-cranefly species are also present in the dataset. An update was made to the dataset in summer 2006 to include another 41000 records from the Cranefly Recording Scheme.	North East	1530	03/03/2011	1/1/1895	31/12/2005	Invertebrate	59	Copy held without management responsibility
BRC - Crayfish - NBN Download	Crayfish (Crustacea; Astacura) data for Britain and Ireland to 2003 by the Biological Records Centre downloaded from the NBN Gateway. (Uploaded 14th July 2004)Records were submitted to the Biological Records Centre as the result of a project funded by English Nature (formerly the Nature Conservancy Council) and the Environment Agency (formerly the National Rivers authority). The project was carried out at Nottingham University by Dr David Holdich, David Rogers and Ian Reeve. This dataset includes field records and records derived from published sources. They cover the period 1900 to 1996. The records have been verified by Holdich and his co-workers and subject to routine validation by BRC.%09Records were collated from the Enviroment Agency by Peter Sibley in 2003. Records were extracted from EA files that had been collected during crayfish surveys by Agency staff, and from other sources. Records were also extracted from the EA macroinvertebrate database of samples collected by Agency staff in the field. This dataset covers the period 1900 to 2003. Records were verified by Agency staff and have been subject to routine validation by BRC.	North East	578	24/10/2012	01/01/1976	03/10/2002	Crustacean	60	Copy held without management responsibility

BRC - Freshwater Fish - NBN Download	This dataset relates to the publication: Davies, C. E., Shelley, J., Harding, P. T., McLean, I. F. G., Gardiner, R. & Peirson, G., eds. 2004. Freshwater fishes in Britain - the species and their distribution. Harley Books, Colchester. A collated information source on the distribution of all freshwater and estuarine fish species for Britain. The data are derived from a variety of sources and as such were collected by both professionals and volunteers. The majority of the records range from 1950-2003 although some records are included from before these dates.	North East	6946	24/10/2012	1/1/1791	31/12/2002	Fish	61	Copy held without management responsibility
BRC - Lacewings - NBN Download	Dataset downloaded from NBN Gateway - Biological Records Centre - "Lacewings and allied insects records from Britain and Ireland to 1999". Data are derived from the Neuroptera Recording Scheme and held at BRC. This dataset includes taxa from the orders: Neuroptera, Megaloptera, Raphidioptera and Mecoptera. The scheme was restarted in 1988 by Colin Plant and the data in this dataset were published in a provisional atlas in 1994. Survey Aim was to establish a baseline of information on the lacewings of Britain and Ireland and to consider the economic importance of lacewings as predators of aphids. Various collecting methods were employed, including light traps, Malaise traps, pitfall traps, water traps and sweeping. BRC RA68 recording cards were used for much of the data capture, with the records being converted to electronic format at BRC. The dataset spans 1908-1999 but most of the records are post-1970. Dataset publsihed in: Plant, C. 1994. Provisional atlas of the lacewings and allied insects Huntingdon: Biological Records Centre. Records were validated and verified by the Scheme organiser. Where necessary, voucher specimen examination was used by known experts to confirm identifications. Records under Chrysoperla carnea	North East	1389	03/03/2011	01/01/1915	03/11/1994	Invertebrate	62	Copy held without management responsibility

BRC - Mosquito - NBN Download	UK mosquito distribution data derived from public collections and from an historical recording scheme. Current purpose is to identify national distribution of mosquito species. Some of the records are historical, dating back to early 20th century from a previous (non HPA/BRC) recording scheme. All records collected through the Mosquito Recording Scheme are taken from specimens submitted by the public and identified at the Health Protection Agency or the Chartered Institute of Environmental Health to species level. Only specimens accompanied with precise geographical location details or grid references are included in the dataset.All specimens submitted have been identified by experienced taxonomists. Submissions have been received sporadically throughout the year and from random locations, therefore this dataset should not be regarded as an exhaustive survey. All geographic location detail accompanying submission are assumed to be accurate and represent the location of collection and have been verified as far as reasonably possible.	North East	102	03/03/2011	01/01/1918	31/12/1990	Invertebrate	63	Copy held without management responsibility
BRC - Ticks - NBN Download	This dataset includes data from the 'Provisional Atlas of the ticks of the British Isles' by K.P. Martyn, published in 1988 by the Biological Records Centre, Huntingdon, additional records submitted to the BRC and data collated through the Tick Recording Scheme. Regular updates have been made to the dataset to include new data from 1998-2007.	North East	71	03/03/2011	26/9/1898	23/07/2008	Invertebrate	64	Copy held without management responsibility
BRC- Dragonfly & Damselfly - NBN Download	This dataset consists of the records collected and collated for the Odonata Recording Scheme (now the Dragonfly Recording Network), which led to the publication of the Atlas of the Dragonflies of Britain and Ireland (1996) by Merritt, Moore and Eversham. It contains not only the records made and submitted by the volunteer community, but also some from historical literature and museum sources. All records have been checked and verified by the national scheme organiser and validated as part of BRC's routine data acquisition process.	North East	1150	03/03/2011	01/06/1900	31/10/1988	Invertebrate	65	Copy held without management responsibility
Breeding Bird Survey Records	Breeding bird surveys carried out on four sites in Northumberland National Park around Walltown Farm, Townshields Farm, Rattenraw Farm and Blakelaw (north of Bellingham) during May and June 2010 and July 2011. Coleoptera of Stainton Orchard 1996	A brief survey of the beetles of Stainton Orchard was undetaken by Tyne and Wear Museums on behalf of INCA between May and July 1996. A site visit on the 31st of May involved collecting species by sweep net and noting the presence of common/easily identified beetles. This was followed by a survey using nine pitfall traps, between 31st of May and 10th of July. Report contains site description, species lists and accounts. Common Land No. 28 Northumberland 1992	In 1986 the Countryside Commission published the Report of the Common Land Forum which resulted in the possibility of new legislation on common land. The Nature Conservancy Council subsequently commissioned the Biological Survey of Common Land in order to assess the implications for conservation agencies. Work on the Survey started in November 1987 and continued until December 1994. It was undertaken by Rural Surveys Research Unit at Aberystwyth University, and following the split of NCC into English Nature, Scottish Natural Heritage and the Countryside Council for Wales in 1991, the three national bodies continued to fund the research. The aim of the survey was to record detailed information about wildlife in each of the common land areas in order to produce informed management schemes. These schemes would be operated by local management associations, consisting of representatives from all interested parties. The survey was split into four areas of work: to produce boundary maps, vegetation maps and, where possible National Vegetation Classifications; to provide brief descriptions of biological interest of each common (mainly botanical but also to include	Northumberland	1443	05/11/2009	26/05/1992	25/09/1992	Amphibian, Bird, Plant, Invertebrate, Lower Plant, Mammal	117	Management

Common Lands of Durham - Biological Survey 2000	Surveys of commons in Durham undertaken as part of a national programme to report on common lands in England. The following extract is taken from the introduction to the report: This report presents the results of a biological survey of the registered common lands of England. It is based on information gathered over a twelve-year period by the Rural Surveys Research Unit (University of Wales, Aberystwyth). The central objective of the national survey of commons has been to draw together an array of biological data from a variety of sources, including Phase 1 mapping of vegetation and habitat types. Such data are potentially of value not only to those with a specialist concern for the conservation of biodiversity, but also to those with a broader interest in the use and effective management of commons - policy makers, stakeholders and numerous other parties, both public and private. While the databases produced as a result of the survey focus on biological attributes (flora, fauna and habitats), in addition they include reference to the location and extent of commons, the nature of rights of common (if any) and details of ownership. Also recorded is the association of commons with various protected area networks (e.g. national	Durham	1230	15/06/2010	15/06/1996	12/03/1997	Bird, Plant, Fungus, Invertebrate, Lower Plant, Mammal	118	Management

Entomological Survey of Linbrigg, Holystone Burn Woods, Grassless Wo	invertebrates sample at 32 sitesin four SSSIs in coquetdale in 1996. Pitfall traps and suction sampling were used to sample beetles, bugs and spiders.	Northumberland	179	21/05/2015	01/06/1996	31/08/1996	Invertebrate	195	Management
Environment Agency Species Data	Environment Agency data extract.First batch sent in 2012 by Maha El Nassar. 2014 update sent by Paul Jameson.*Restriction Document sent with data.*	North East	145	12/02/2014	01/01/2006	23/12/2013	Amphibian, Crustacean, Plant, Invertebrate, Mammal	196	Management
Eppleton Railway SNCI	Eppleton Railway SNCI, Sunderland survey conducted in July 2001. Provided by Natural England. Report contains botanical species lists for five 2m -squared quadrats, site descriptions, site map and community analysis of these lists conducted by University of Lancaster using MATCH, with the dominant community identified as MG 5 (Mesotrophic Grassland).	Sunderland	313	17/05/2013	12/07/2001	12/07/2001	Plant, Lower Plant	197	Management
ERIC North East Website Records	Wildlife sightings recorded through the recording portal on the ERIC North East web site	UK	4985	18/12/2015	28/03/1991	27/11/2015	Invertebrate, Alga, Amphibian, Bird, Fish, Chromist, Lower Plant, Plant, Crustacean, Fungus, Reptile, Mammal	198	Custodianship
Eston Pumping Station Phase 1 & Bran Sands PSYM Reports 2010	Data from two surveys commissioned by Northumbrian Water. A pond at Bran Sands sewage treatment works, Teesport, was surveyed on 4th August 2010 by Martin Hammond as part of a wider study of ponds on Northumbrian Water operational sites. The pond was surveyed using the PSYM methodology, a technique for assessing the ecological quality of standing water habitats developed by the Environment Agency and Pond Conservation. However, whilst PSYM only requires family-level data for aquatic macro-invertebrates, the vast majority of invertebrates were identified to species-level in order to provide a more informative assessment. The report on Eston Pumping Station was prepared by Tees Valley Wildlife Trust and other consultants to assist Northumbrian Water to plan for appropriate site management for biodiversity. It identifies and assesses the nature conservation interests of the site and uses the site selection criteria developed by the Tees Valley Local Sites Partnership to give an indication of the conservation value of the site in comparison with other non-statutory conservation sites in the sub-region. This report was based on fieldwork undertaken between August 2008 and July 2010.	North East	133	27/04/2015	01/08/2008	04/08/2010	Bird, Crustacean, Invertebrate, Plant, Lower Plant, Mammal	199	Management
Etal Castle Botanical Survey 1998	Botanical survey of Etal Castle by Judith Baker in July 1998 for English Heritage	Northumberland	31	08/06/2010	10/07/1998	10/07/1998	Plant, Lower Plant	200	Management

Hay Meadows in South Northumberland 1983	Botanical survey of 142 hay meadow sites in Northumberland by Jenny Loring of Northumberland Wildlife Trust. Surveys took place from late June to late July 1983. Most of the locations were in the East Allen Valley, though a few were near Dipton Burn, south of Hexham and a couple near Blanchland	Northumberland	7653	31/08/2010	27/06/1983	29/07/1983	Plant	272	Management
Hay Time Meadow Surveys 2006-2012	The North Pennines AONB Partnership launched its Hay Time project in May 2006 with the aim of restoring and enhancing upland hay meadows within the AONB and increasing people's awareness, enjoyment and understanding of this important habitat. The first phase of the project ran from 2006 to 2008. The project was re-launched with an expanded team in 2009 and run until October 2012. Botanical surveys of upland hay meadows were carried out between May and June where surveyors reported on field features and vegetation by walking a zig-zag route across the field. Survey results were used to identify donor and receptor for restoration and enhancement of meadows.	Durham, Northumberland	7275	11/02/2016	04/06/2009	19/07/2012	Plant	273	Management
Heart of Teesdale - Bird & Farm Landscapes	The B&FL project (run from 2013 - 2016) aimed to improve habitat and feeding conditions for threatened farmland birds such as black grouse, grey partridge, tree sparrows and barn owls across Teeside. The Project was managed through the Mid Teesdale Project Partnership. Partners were The Durham Bird Club and Trees for Cotherstone. Help and advice was provided by Natural England, The Game and Wildlife Conservation Trust and the North Pennines ANOB Partnership. During the three and a half years of the project more than 100 farms were visited, often many times, and 115 volunteers were involved in bird surveys, tree planting, making and monitoring nest boxes and a host of other activities. Hunt for Lost Meadows 2008	The Wildflower Ark co-ordinated a one year project, 'Hunt for Lost Meadows', funded through a grant from the National Lottery through the Heritage Lottery Fund. The aim of the project was to locate lowland meadows in eastern Cleveland, to produce an inventory with information on their location, character, extent and condition, and increase public awareness of this valuable habitat through exhibitions, guided walks and talks to local community groups. During the project, sixty nine sites were visited and thirty nine were found to be lowland meadows containing areas of herb-rich grassland. Some are unimproved grassland and others are semi-improved grassland (that is they have had some fertiliser application, but they are still relatively wildflower-rich).		2350	08/04/2009	01/06/2008	31/10/2008	Plant	282	Management

Invertebrate Site Register - England (1738-2005) - NBN Download	Dataset of information on the site-based occurrence of scarcer British and strongly habitat-associated terrestrial and freshwater invertebrates. It has gathered data from a wide variety of often scattered sources, synthesized it to produce readily accessible information for use in all facets of invertebrate conservation.The ISR was set up to: identify, document and evaluate sites of importance for the conservation of terrestrial and freshwater invertebrates in Great Britain, in order to provide national and local overviews of the resource and set this in a European context. Provide a clear statement on the invertebrate fauna of individual sites, which can be used to strengthen the scientific basis of site defence and management planning.Data have been gathered systematically from national and local entomological, other invertebrate and other natural history journals, the paper data files of the regional offices of the country conservation agencies and utilities, local record centres, national recording schemes, museum collections, county wildlife trusts, research establishments etc, and the notes, collections and experience of amateur and professional entomologists and naturalists. Lampert Mosses SSSI Invertebrate Survey	The primary objective of the survey was to assess the condition of the notified invertebrate assemblage "Sphagnum bog" of the Lampert Mosses site. Four mosses were selected for survey by pitfall trapping, suction sampling, sweep netting and pond netting. Findings are given for the four sites combined and for the individual discrete areas surveyed. See PDF Report for more details and notes for any rare or notable invertebrates encountered. Species groups recorded included spider, beetle, hemiptera, hymenoptera, lepidoptera and Odonata; with a total of 271 species identified within these groups. Nineteen species identified were indicative of Sphagnum Bog, which indicates the feature is in favourable condition for this assemblage type. Six species have conservation status (Carabus nitens, Agonum ericeti, Stenus oscillator, Macrocera estonica, Rhamphomyia obscura & Coenosia pulicaria). Survey carried out by EMEC Ecology for Natural England.	Northumberland	847	18/01/2016	02/06/2015	09/09/2015	Invertebrate, Fungus	302	Management
Lanchester Wildlife Group Ongoing	Miscellaneous records from Lanchester Wildlife Group - An RSPB Wildlife Explorer group, aimed at families with young children. It holds meetings in and around Lanchester village alternated with field trips to other exciting wildlife sites further afield within the North East. Survey contains records from 1986 through to 2011.	North East	1064	06/03/2015	14/01/1986	25/01/2011	Bird, Plant, Fungus, Invertebrate, Lower Plant, Reptile, Mammal	303	Management

Large Heath Butterfly Status in Northumberland 1995	The Large Heath is a species which is potentially vulnerable to decline due to habitat change/fragmentation. This survey presents records from a number of sites across Northumberland, surveyed by Harry Eales in 1995. As sites were surveyed across a number of years (see additional Harry Eales Large Heath Surveys in Recorder) this allows population changes to be tracked.	Northumberland	608	08/10/2015	26/06/1995	01/08/1995	Invertebrate	306	Management
Large Heath Butterfly Status in Northumberland 1997	The Large Heath is a species which is potentially vulnerable to decline due to habitat change/fragmentation. This survey presents records from a number of sites across Northumberland, surveyed by Harry Eales in 1997. As sites were surveyed across a number of years (see additional Harry Eales Large Heath Surveys in Recorder) this allows population changes to be tracked.	Northumberland	269	20/04/2011	19/07/1996	03/08/1997	Invertebrate	307	Management
Large Heath Butterfly Status in Northumberland 1998	The Large Heath is a species which is potentially vulnerable to decline due to habitat change/fragmentation. This survey presents records from a number of sites across Northumberland, surveyed by Harry Eales in 1998. As sites were surveyed across a number of years (see additional Harry Eales Large Heath Surveys in Recorder) this allows population changes to be tracked.	Northumberland	182	21/04/2011	03/06/1998	28/07/1998	Invertebrate	308	Management
Lead Mine Sites Botanical Survey 1984	Lead Mine Sites Botanical Survey 1984, completed by J Warren & Angus Lunn.		74	08/01/2015	01/01/1984	31/12/1984	Plant	309	Management
Leazes Park, Newcastle upon Tyne	Bird and plant records from Leazes Park, Newcastle-upon-Tyne. Records come from two different sources: 1) A survey to inform a management plan for Leazes Park, completed by Northumberland Wildlife Trust 2) Sightings during lunchtime walks by EYE project staff. Records span 2002-2007.	Tyne and Wear	73	27/07/2009	01/05/2002	17/01/2007	Bird, Plant	310	Management

Survey Name	Description	Geographic coverage	No.of Records	Last entry date	Earliest record	Latest record	Broad Groups	Survey reference	Custodianship/ management
Lemington Development Corridor Survey 2002	Records from a planning application survey of the Lemington Development Corridor, completed in 2002. The aim of the assessment was to identify the most ecologically significant areas in the LDC boundary and their importance within the wider ecological unit. . On the whole the LDC has some regional and many locally important ecological assets. Much of this is already part of public open space, but some has developed on neglected industrial sites. Careful planning can incorporate these features into future development of the area, but a close dialogue with planners is required if this is to be achieved to its full potential. The survey was run by City Design, and the data was provided to ERIC by Newcastle City Council.	Tyne and Wear	181	22/12/2008	01/01/2002	31/12/2002	Amphibian, Bird, Fish, Plant, Invertebrate, Mammal	311	Management
Lemington Gut SNCI	Botanical survey of Lemington Gut SNCI carried out by Northumberland Wildlife Trust in 1990 for Newcastle City Council	Tyne and Wear	83	04/03/2009	01/01/1990	31/12/1990	Plant	312	Management
Leven Yarm - Community Records	Records from Keep Eaglescliffe Special community group, using ERIC recording sheets and ID guides.	Eaglescliffe and surrounding area	142	25/09/2012	01/01/2006	08/05/2013	Amphibian, Bird, Invertebrate, Mammal	313	Management
Limestone Landscapes Village Atlas Data	Portal for residents of the villages in the Village Atlas project to log wildlife sightings.		3835	11/02/2016	31/12/2009	03/07/2015	Amphibian, Bird, Plant, Invertebrate, Reptile, Mammal	314	Management
Little Waters SNCI	Botanical survey of Little Waters SNCI carried out in August 2003 by the Ponds Conservation Trust for their National Ponds Survey which was published in 2004.	Northumberland	36	23/06/2010	12/08/2003	12/08/2003	Plant	315	Management
Living With Mammals	Records of mammal sightings at sites in the built environment (predominantly urban and suburban gardens) during April, May and June in each year.		1655	22/12/2015	01/01/2003	26/06/2011	Mammal	316	Management
Longhirst Hall - Northumberland BAP Launch 2007	Records collected by attendees at the launch of the Northumberland Biodiversity Action Plan, May 2007. Verified by Nick Brodin.	Grounds of Longhirst Hall, nr. Morpeth	49	13/02/2008	22/05/2007	22/05/2007	Plant	317	Management
Lordenshaws BioBlitz - 2011	Records from a bioblitz at Lordenshaws, run by ERIC in 2011. Note, there is one more record in the spreadsheet than in the Recorder survey. This needs investigating.	near Lordenshaws	305	07/02/2012	23/06/2011	24/06/2011	Invertebrate, Amphibian, Bird, Plant, Crustacean, Fungus, Lower Plant, Reptile, Slime Mould, Mammal	318	Custodianship

Newcastle University - Phase 1 Survey	In 2011 Newcastle University commissioned a Phase 1 Habitat Survey of 10 sites across its estate. The survey was commissioned as a 'biodiversity audit' of habitats and species present on the estate, to aid maintenance and enhancement projects in the future. The survey found that the majority of sites were of little botanical interest, with the exception of hedgerows, woodland and S-I grasslands, which have higher conservation value. Other areas on the estate have the potential to support bat and GCN populations Surveys were completed in 2012 by Michael Bradburn.	Tyne and Wear	182	03/03/2014	01/05/2012	29/06/2012	Plant	366	Management

Survey Name	Description	Geographic coverage	No.of Records	Last entry date	Earliest record	Latest record	Broad Groups	Survey reference	Custodianship/ management
North Brenkley SNCI	Survey (mainly botanical) of North Brenkley and Brenkley Ponds by Newcastle City Council in 1990.	Northumberland	86	30/12/2008	01/01/1990	31/12/1990	Bird, Plant, Mammal	370	Management
North East England NVC Woodland Surveys	Botanical records from NVC surveys of woodlands across North East England. Surveys completed in 1990 by the Nature Conservancy Council.	North East	439	25/06/2009	01/01/1990	31/12/1990	Plant, Lower Plant	371	Management
North East Fungus Study Group	This survey contains fungi records collected by the North East Fungus Study Group. The aims of the North-East Fungus Study Group are: 1) To develop our own interest in and knowledge of the fungi of our region. 2) To promote and encourage this interest and knowledge in others through contact with various wildlife groups. 3) To record the fungi of north-east England. 4) To promote the conservation of fungi and of threatened habitats of rare fungi. Records were downloaded from the NEFSG website.	North East of England	25586	06/05/2015	02/10/1907	15/11/2014	Chromist, Fungus, Lower Plant, Slime Mould	372	Management
North East Reptile & Amphibian Group	NERAG was set up in the Autumn of 2007 by members of staff from the EYE project based at the Hancock museum in Newcastle upon Tyne and several other people with a passion for herpetofauna. The principle aims of NERAG are to identify and record existing and new populations of herpetofauna throughout the North East. These records are accessible to those with an interest in wildlife management, habitat enrichment and conservation as well as developers, land owners and the general public. This survey recieves updates on an ongoing basis. In addition to reptiles and amphibians there are records of plants, lower plants, inverterbrates and mammals. NOTE: There are 654 records in the master spreadsheet V 651 records in Recorder (KF: 29/06/2016).	North East	651	21/05/2015	01/01/2007	17/04/2015	Amphibian, Bird, Plant, Invertebrate, Lower Plant, Reptile, Mammal	373	Management
North Pennines AONB - Casual & Staff Records	Casual records sent in by North pennines AONB staff. Records begin in 1985 and go through to 2011. All records are zoological. *There are potential issues with this dataset* 1) More records in recorder than in the master ongoing spreadsheet. Where did the additional records come from? 2) Could be some grid ref issues. KF identified and resolved any obvious ones (June 2016), but there may be others.	Durham, Northumberland	229	22/04/2013	03/10/1985	09/12/2011	Amphibian, Bird, Invertebrate, Reptile, Mammal	374	Management

Survey Name	Description	Geographic coverage	No.of Records	Last entry date	Earliest record	Latest record	Broad Groups	Survey reference	Custodianship/ management
North Pennines AONB - Cuckoo Public Survey 2010	Cuckoo records compiled from a public survey for the species, run by the North Pennines AONB in 2010. This survey was launched in response to worrying signs that cuckoos in the lowland landscape were in rapid decline. The public survey returned 36 cuckoo records, which was considered a good number by the AONB at the time.	North East	38	02/08/2011	01/01/2010	31/12/2010	Bird	375	Management
North Pennines AONB - Violet Oil Beetle Public Survey 2010	Violet oil beetle records compiled from a public survey for the species, run by the North Pennines AONB in 2010. Oil beetles are an important indicator of wild flower-rich habitats, and have declined so much in recent years that five out of our nine native species are now extinct. Six records were found within County Durham	North East	6	02/08/2011	26/04/2010	16/06/2010	Invertebrate	376	Management
North Pennines AONB - Water Vole Database	Water vole records from the North Pennines AONB. Records are from direct sightings, indirect signs and tracks. Records span 1899 - 2011. Note that some records are negative (i.e. search effort made, but no evidence of water voles found). These records may need removing.	North East	866	31/01/2012	30/12/1899	31/12/2011	Mammal	377	Management
North Pennines SNCI Survey 1997	Botanical surveys of 17 sites in the part of the North Pennines AONB which lies in Northumberland. Undertaken by Northumberland Wildlife Trust in 1996 and 1997.	Durham, Northumberland	239	25/03/2009	01/01/1996	31/12/1997	Plant, Lower Plant	378	Management
North Pennines Upland Habitats Survey - Hexhamshire Common, Blanc	Data from surveys of North Pennines upland habitat - Hexhamshire Common, Blanchland Moor, Nookton Fell. Surveys carried out in 1992 by Scottish Natural Heritage. Survey data provided by Natural England. Plant, lower plant, amphibian, bird and mammal records present.	Durham, Northumberland	171	23/02/2009	23/03/1992	30/04/1992	Bird, Plant, Lower Plant, Mammal	379	Management

North Pennines Upland Habitats Survey - Lune Forest - Stainmore Fores	Data from surveys of North Pennines upland habitat - Lune Forest - Stainmore Forest. Surveys carried out in 1992 by Scottish Natural Heritage. Survey data provided by Natural England. Plant, lower plant, reptile and bird records present.	Durham, Northumberland	269	23/03/2009	01/01/1992	31/12/1992	Bird, Plant, Lower Plant, Reptile	381	Management
North Pennines Upland Habitats Survey - Middlehope Moor, Stanhope	Data from surveys of North Pennines upland habitat - Middlehope Moor, Stanhope Common, Wolsingham Park Moor. Surveys carried out in 1992 by Scottish Natural Heritage. Survey data provided by Natural England. Plant, lower plant, mammal and bird records present.	Durham, Northumberland	166	09/02/2009	01/01/1992	31/12/1992	Bird, Plant, Lower Plant, Mammal	382	Management
North Pennines Upland Habitats Survey - Scargill High Moor, Kexwith M	Data from surveys of North Pennines upland habitat - Scargill High Moor, Kexwith Moor, Marske. Surveys carried out in 1992 by Scottish Natural Heritage. Survey data provided by Natural England. Plant, lower plant, mammal and bird records present.	Durham, Northumberland	319	11/06/2009	01/10/1992	30/11/1992	Bird, Plant, Lower Plant, Mammal	383	Management
North Pennines Upland Habitats Survey - Whitfield Moor, Stangend Cu	Data from surveys of North Pennines upland habitat - Whitfield Moor, Stangend Currick. Surveys carried out in 1992 by Scottish Natural Heritage. Survey data provided by Natural England. Plant, lower plant, invertebrate and bird records present.	Durham, Northumberland	302	09/02/2009	01/01/1992	31/12/1992	Bird, Plant, Invertebrate, Lower Plant	384	Management
North Tyneside Bird Population Baseline Monitoring 2005 - 2007	Survey commissioned in 2005 by North Tyneside Council to establish a breeding season base-line population for Grey Partridge, Skylark, Song Thrush, Reed Bunting and to establish whether there were breeding populations of Barn Owl and Tree Sparrow within the Local Authority. This survey was repeated in 2006. Ten sites were identified as likely breeding locations for some or all target species and two visits were made to each site. Report contains site descriptions, species description and sighting records.	Tyne and Wear	348	07/08/2014	01/01/2005	08/06/2007	Bird	385	Management
North Tyneside Water Vole Survey 2002	Species data from surveys for water voles across North Tyneside. Records comprise a mixture of direct sightings, and other tracks and signs. In addition to water voles sightings of other mammals, birds and invertebrates were recorded. Surveys completed in 2002 by Northumberland Wildlife Trust.	Tyne and Wear	108	20/10/2008	14/05/2002	30/09/2002	Bird, Invertebrate, Mammal	386	Management
Northern Upland Chain Bat foraging habitat suitability maps 2014 LNP	Survey of bat habitat suitability carried out using bat detectors.Survey commissioned by Northern Upland Chain LNP and carried out by University of Leeds. We received via Sam Finn at the North Pennines AONB, however if we have any queries contact Chloe Bellamy.	North East	1448	10/03/2015	01/06/2013	31/08/2013	Mammal	387	Management

Northumberland Fens & Flushes - NVC	An NVC survey of fen sites in Northumberland was undertaken between August and October of 2010, to provide information for updating Natural England's inventories of BAP (Biodiversity Action Plan) habitat. The cluster of sites lay in the central part of the Roman Wall Escarpment in the vicinity of Broomlee, Greenlee and Crag Loughs. The method used was that of Rodwell et al (1991), with species-lists compiled for each stand in addition to the sampling of representative quadrats. Stand boundaries were mapped in the field onto hard-copy aerial imagery; together with field notes and sketches these were used in the compilation of fair-copy electronic maps using Pitney-Bowes MapInfo software (version 10). All quadrats were GPS-referenced. Some additional wet grassland, aquatic and OV (weedy) vegetation communities were sampled in addition to all mire, swamp and wet woodland types, as specified in the contract. Northumbrian Water - Waxcap Grassland Surveys	Data downloaded from Northumbrian Water Website. "Waxcap Grassland" is a term coined to describe semi-natural grassland types supporting assemblages of certain groups of grassland fungi. The key groups consist of waxcaps (Hygrocybe species), fairy clubs (Clavulinaceae), earth-tongues (Geoglossaceae), pink gills (Entoloma species) and fungi belonging to the genera Dermoloma, Porpoloma and Camarophyllopsis. All of these fungi are restricted to growing in agriculturally unimproved grasslands, i.e unfertilised grasslands with low levels of dissolved nitrogen and phosphorus. Such grasslands have become a rare and threatened habitat type throughout Northern Europe since the 1940's and the UK is now known to be globally significant for this habitat type. Increased recognition of their conservation value has led to the recent inclusion of waxcap grasslands within national and local conservation frameworks such as Biodiversity Action Plans (BAPs) and Red Data lists. Nearly all of the UK's 49 waxcap species are included on at least one Red Data fungi list in Northern Europe. In the UK the 4 following species of grassland fungi currently receive recognition within the national BAP; Hygrocybe spadicea (Date-	North East	343	29/06/2011	26/08/2008	12/11/2010	Fungus	412	Management
Northumbrian Water - Whittle Dene Pond Complex	Whittle Dene reservoirs are part of a water supply system interconnected by streams and aqueducts. The reservoirs form part of a Northumberland Wildlife Trust reserve, which is jointly managed by Northumbrian Water. This survey contains data from species records collated by Northumbrian Water. Data are present from the following taxonomic groups: Amphibian, Crustacean, Plant, Invertebrate, Lower Plant. Pinewoods Bat Survey 2013	Penn Associates was commissioned to undertake bat roost surveys at Pinewoods, Winlaton, Gateshead in May 2013. This report presents the results of the required roost surveys which were undertaken between May and July 2013, and comprised two dusk activity surveys on buildings 2-8, and one dusk activity survey on buildings 1 and 9. During the two surveys, two roosts were identified, both of which were small (1-2 bats) transient day roosts. A phase 1 habitat and bat risk assessment of the buildings was carried out by E3 Ecology Ltd in January 2013, and an extract from the associated report is attached as Appendix A. Report contains site and building descriptions, methodology, survey results, impact assessment and mitigation requirements. Survey Name	Description	Geographic coverage	No.of Records	Last entry date	Earliest record	Latest record	Broad Groups	Survey reference	Custodianship/ management
Riverine Shingle Beetles 2005	Data from Riverine Beetle Surveys across the North East, provided by the Environment Agency. The vast majority of sites were surveyed in 2005, with additional surveys from 2004, 1996 and 1988. Most records are located along the rivers Coquet, South Tyne, Till and Wear.	North East	425	30/10/2009	03/07/1988	21/06/2005	Invertebrate	463	Management
Roger Manning	Casual records from Roger Manning. We recieve these records sporadically, beginning in 2004. Records are spread across Northumberland, with a concentration along coastal areas from Berwick-upon-Tweed in the North to Ashington in the South. Records are present from a wide range of taxonomic groups.	North East	1214	18/06/2014	23/10/2004	31/05/2012	Amphibian, Bird, Fish, Invertebrate, Plant, Crustacean, Fungus, Lower Plant, Slime Mould, Mammal	464	Management
Ross Links, Lindisfarne SSSI NVC 1998	NVC survey of Ross Links, Lindisfarne between May - July 1998. Survey complied by English Nature (now Natural England).	Lindisfarne	375	29/06/2009	01/05/1998	31/07/1998	Plant, Lower Plant	465	Management
Ryton Island SNCI	Bird and plants survey of Ryton Island, completed in February 1984. Data supplied by Newcastle City Council.	Tyne and Wear	17	03/03/2009	10/02/1984	10/02/1984	Bird, Plant	466	Management
Ryton Willows & Westfield Pasture Invertebrate Survey 2002	Invertebrate survey of Ryton Willows and Westfield Pasture, completed by Entomological Monitoring Services in 2002. Three ponds at Ryton Willows were sampled for aquatic invertebrates, to assess site quality in relation to SSSI status. Two areas of Westfield Pasture were sampled for terrestrial invertebrates, to assess quality of invertebrate habitat. The surveys found considerable degradation of pond habitat quality, and only limited quality habitat for terrestrial invertebrates.	Ryton	508	26/03/2009	01/01/2002	31/12/2002	Crustacean, Invertebrate	467	Management
Sabrina Kelly Dissertation Records	Sabrina Kelly's dissertation records given to ERIC in 2011		213	17/05/2013	17/06/2010	16/08/2011	Bird, Plant, Invertebrate, Mammal	468	Management
Sacred Heart Pond SNCI	Botanical Survey of Sacred Heart Pond (an SNCI near North Brunton, Newcastle-upon-Tyne). Records span 1989-1990.	Newcastle-upon-Tyne	14	04/03/2009	01/01/1989	31/12/1990	Plant	469	Management

Sedgefield Grassland Inventory 2006	Inventory of grassland sites across County Durham, commissioned and run under the Magical Meadows Partnership (part of Durham Wildlife Trust). The surveys were conducted as it was felt that information on grassland condition was out of date, with the last surveys conducted in the early 1990s. The 2006 survey found significant loss of semi-improved grassland habitat across the region, but it also found that brownfield sites retained high botanical diversity. Plant, amphibian and mammal records are present in the survey.	Sedgefield Borough	1816	18/04/2011	01/04/2006	15/08/2006	Amphibian, Plant, Mammal	475	Management
Signal Crayfish	Transfer from Durham Biodiversity Data Service.	DWT Area	11	31/03/2011	01/01/2000	31/12/2006	Crustacean	476	Management

Stobswood Opencast Site	Report of a survey of the plants and birds of woodlands in and around the proposed Stobswood Opencast Site.Commissioned by British Coal Opencast Executive in order to provide information on the flora and fauna of the woodlands on and around the proposed Stobswood Opencast Site near Ulgham in Northumberland. It follows on from an earlier report commissioned in 1987 which sought to clarify the nature conservation value of the site (NWT Dec 1987).Areas surveyed:Park Wood and Haughspring Wood: 36ha of mixed broadleaf and conifer woodland that will be lost in the working of the coal.Robinhood Wood: 7ha of primarily broadleaf woodland that lies within the proposed opencast site boundary but will not be lost in the working of the coal.The River Lyne "Corridor" from Ulgham Grange to Trithington Hall including Bricks Plantation: a thin ribbon of semi-natural habitats along the banks of the River Lyne, including relict woodland.	Northumberland	728	12/04/2016	01/05/1988	31/05/1988	Bird, Plant	491	Management
Stocksfield Habitat Survey - 2003	Habitat Survey of Stocksfield Parish area run by the Stocksfield Environment Group. Main focus to record and map different vegetation types but also noted other wildlife.	Northumberland	1426	03/12/2015	01/01/2003	31/12/2003	Bird, Plant, Fungus, Invertebrate, Mammal	492	Management
Stoneloach 1992 - 2005	Environment agency inventory of stone loach across the North East. Survey records run from 1992 - 2005.	North East	498	03/11/2008	01/01/1992	31/12/2005	Fish	493	Management
Sugley Dene SNCI	Sugley Dene is an LNR and SNCI located in Lemington, Newcastle-upon-Tyne. The site is a narrow wooded valley comprising semi-natural ancient woodland. This survey completed by Newcastle City Council between 1995-1996 contains bird, plant and lower plant records.	Newcastle-upon-Tyne	149	21/07/2009	01/02/1995	31/05/1996	Bird, Plant, Lower Plant	494	Management
Swallow Pond & Plantation LNR	Wetland and aquatic invertebrate survey of Swallow Pond in Wallsend (Newcastle-u-Tyne), undertaken by the Pond Conservation Trust. The aims of the survey were to get information about the ecological condition of the site, and to provide a basis for future management decisions. Plants were surveyed by walking the perimeter of the pond, and invertebrates were surveyed by net sampling.	Wallsend	101	23/06/2010	20/08/1996	28/08/2003	Invertebrate, Crustacean, Plant, Lower Plant	495	Management
Tees Area Reptile Survey	Reptile surveys commisioned by Northumbria Water and carried out by Young Nature Ecological Consultancy at Northumbria Water sites in the Tees area in 2009. The surveys aimed to identify which reptile species use each site, estimate a population size for each species and discuss factors that may deter reptiles from entering each site. Surveys were done using an initial site walk, after which reptile refuges were set up and revisited at a later date. In addition to reptile records the surveys record amphibian, bird, plant, invertebrate and mammal sightings.	Tees	177	04/12/2013	01/01/2009	31/12/2009	Amphibian, Bird, Plant, Invertebrate, Lower Plant, Reptile, Mammal	496	Management

Survey Name	Description	Geographic coverage	No.of Records	Last entry date	Earliest record	Latest record	Broad Groups	Survey reference	Custodianship/ management
Water Vole Survey 1997	Watervole survey across the North Pennines, completed over the summer of 1997. Records were determined on the basis of signs and tracks rather than direct sightings. Otter and mink signs were also recorded.	North Pennines	15	30/01/2008	21/05/1997	19/09/1997	Mammal	548	Management
Water Vole Survey 2000	Results from water vole surveys across Northumberland, conducted by Northumberland Wildlife Trust in 2000. In addition to water voles, records of otters, mink and brown rats are also included.	Northumberland	62	21/10/2008	01/01/2000	31/12/2000	Mammal	549	Management
Water Vole Survey 2006	Records from a 2006 survey across Northumberland and the Tees catchment area for water vole sightings and signs (e.g. tracks). 265 sites with previous water vole records were surveyed, with 100 additional sites for which there were no prior data also surveyed. In addition to water vole records other species were noted including additional mammals, birds and plants.	Northumberland and Tees Catchment	470	13/05/2013	01/01/2006	31/12/2006	Bird, Crustacean, Plant, Invertebrate, Mammal	550	Management
Waxcap Grassland Survey of Hadrian's Wall	In addition to water vole records other species were noted including additional mammals, birds and plants.	Northumberland	406	11/01/2016	27/10/2004	05/11/2013	Fungus	551	Management
Weardale Roadside Flora Project	Botanical and reptile records from surveys of roadside verges in Weardale, comissioned by the Durham Biodiversity Action Plan. As many roadside verges in Weardale are remnants of hay meadows, they have the potential to be of considerable value to wildlife. The goal of the surveys was to identify verges of current or potential conservation interest, with a view to providing management recommendations for these sites.	Weardale west of A68	683	09/07/2007	30/05/2001	05/07/2007	Plant, Reptile	552	Management
Weetslade Country Park	Data compiled from monthly species records within Weetslade Country Park, a Northumberland Wildlife Trusts Reserve (formerly a colliery site) just northeast of Newcastle-upon-Tyne. Records comprise the following taxonomic groups: Amphibians, birds, flowering plants, butterflies, dragonflies, hymenoptera and mammals.	Tyne and Waear	4411	27/07/2010	01/07/2007	30/07/2009	Amphibian, Bird, Plant, Invertebrate, Mammal	553	Management
Whin grassland sites in Northumberland 1990	This survey is currently classed as ongoing, although the most recent record is dated at 30/07/2009.		421	27/05/2015	23/05/1990	19/06/1990	Lower Plant, Plant	554	Management
Whitburn Bird Observatory Log Book	Brian Unwin's paper log book digitized by year. 2002, 2003 , 2001 and 1999 entered	Whitburn	10337	12/11/2015	02/01/1999	04/02/2004	Amphibian, Bird, Plant, Invertebrate, Mammal	555	Management
White Clawed Crayfish 2013 - Northumberland	A survey in the River Tyne catchmnet of White Clawed Crayfish conducted by NWT in 2013	Northumberland	31	19/02/2014	01/07/2013	01/07/2013	Crustacean	556	Management
White-Clawed Crayfish	White Clawed Crayfish records from Durham Wildlife Trust. Separate survey available with Signal Crayfish.Transfer from Durham Biodiversity Data Service.	DWT area	12	31/03/2011	30/12/1899	31/12/2005	Crustacean	557	Management
White-Clawed Crayfish 1993 - Wansbeck, Blyth, Pont	White-clawed crayfish records returned from National Rivers Authority Surveys conducted between 1990-1993. The records range from Nabhill (near Berwick-upon-Tweed) in the North to Barnard Castle in the South, though the vast majority of sites are located along the Wansbeck river in Northumberland.	Northumberland, Durham	85	04/03/2009	12/03/1990	26/08/1993	Crustacean	558	Management
